Business Strategy

Based on the analysis of the international movie market, the recommended strategy is to focus on producing and promoting films in genres with a high number of votes and high audience ratings. Based on the top 10 genres with the highest number of votes ordered by average ratings, genres such as Biographies, Animation, Drama and Crime tend to perform well globally. Partnering with or emulating successful production companies like Miramax Films and Twentieth Century Fox, known for high ratings, could further enhance brand reputation and attract wider audiences. Additionally, targeting specific international markets with proven success in box office ratings, especially the United States, the United Kingdom and other high-performing countries, could maximize market reach and profitability. We can also identify the top performing countries by specific genres in order to gain relevant insights on where to release movies or invest in local production. Investing in higher-rated genres and targeting specific countries for distribution could enhance the company's international market share. By tracking historical rating trends, the company can also stay aligned with shifting audience preferences, ensuring that content resonates with viewers over time.

Dashboard and Design Explanation

The dashboard is designed to align with this strategy by providing key visualizations that highlight top-performing genres, production companies, and countries. The **Genre Popularity and Ratings** chart allows easy identification of genres with the highest average ratings for the top 10 genres with the highest average number of votes, enabling the company to prioritize these categories. The **Production Company Comparison** showcases which companies consistently produce highly-rated films, serving as benchmarks or potential collaborators. The **Country-Wise Production Success** map visually represents regions with strong market influence, helping identify target countries for distribution or localized production by genres, as the size of the circles indicate the cumulative number of votes, while the colours refer to the average ratings. Lastly, the **Time Series** of ratings over the years provides historical context to ensure the company stays adaptable to long-term trends. Filters can be used to view trends over time, filtering for specific years, as well as genres, production companies or countries and identify high-potential areas for investment, as the charts offer insights into regional and genre-based performance. Each component of the dashboard is crafted to support data-driven decisions that drive both popularity and profitability in the international market.
